

Eosinophil Ultrastructure

Atlas of Eosinophil Cell Biology and Pathology

Rossana C.N. Melo, Professor of Cell Biology, Federal University of Juiz de Fora, Juiz de Fora, Minas Gerais, Brazil; Visiting Scientist from 2002 to 2019, Beth Israel Deaconess Medical Center, Harvard University, Boston, MA, USA; **Ann M. Dvorak**, Professor Emerita of Pathology, Beth Israel Deaconess Medical Center, Harvard Medical School, Boston, MA, USA, and **Peter F. Weller**, William B. Castle Professor of Medicine, Harvard Medical School, Beth Israel Deaconess Medical Center, Professor of Immunology and Infectious Diseases, Harvard T. H. Chan School of Public Health, Boston, MA, USA

Drawing on their decades of studies together, the authors provide unique expertise and experience related to human eosinophils, and the atlas of eosinophil ultrastructure is a product of their longstanding studies.

Hardcover ISBN: 978-0-323-99413-2

eBook ISBN: 978-0-128-137-567

VOLUME:

EDITION: 1

PUB DATE: January 2022

LIST PRICE: \$120.00

DISCOUNT: Non-serials

TRIM: 8.5w x 10.875h

PAGES: c. 518

AUDIENCE: Researchers in structural biology, cellular immunology, innate and adaptive immunity, immune responses to pathogens, immunopathology, and inflammatory responses **SHELVING**

CLASSIFICATIONS:

Life Sciences (General)

BISAC CODES: PSA

THEMA CLASSIFICATION:

THEMAPSA

A guide for scientists who use electron microscopy to understand human eosinophils in studies that focus on structural biology, cellular immunology, and more

KEY FEATURES

- Gives guidelines to understand the human eosinophils in studies focused on structural biology, cellular immunology, innate and adaptive immunity, immune responses to pathogens, immunopathology, and inflammatory responses
- Provides a core of essential knowledge to identify both immature and mature eosinophils
- Comprises a representative compilation of the eosinophil ultrastructure during biological processes, such as activation and degranulation, mostly under experimental conditions
- Highlights eosinophil biological processes found in vivo during human diseases, thus providing a link between basic science and clinical aspects
- Helps identify distinguishing features and structural changes that arise during studies of human eosinophils after isolation from body fluids, while in cultures, or biopsies
- Explains the ultrastructural organization of mature and immature mouse eosinophils, highlighting the similarities/differences between them and human eosinophils

DESCRIPTION

Eosinophil Ultrastructure: Atlas of Eosinophil Cell Biology and Pathology entirely focuses on eosinophils and their functional roles in inflammation, host defense, and normal homeostatic activities. The book explores the ultrastructure of human eosinophils, highlighting biological processes observed under normal, experimental, and pathological conditions.

Created to fill a void in the eosinophil literature, the book includes an extensive array of electron microscopic images that illustrate the diversity of eosinophil morphology. While the atlas is a learning and teaching tool, it is mainly a helpful resource for researchers to identify distinguishing features and structural changes that arise during studies of human eosinophils.

The book also covers the ultrastructure of mouse eosinophils under normal and activation conditions and in the context of representative diseases.

Table of Contents

Preface

SECTION I - THE CELL BIOLOGY OF HUMAN EOSINOPHILS

Chapter 1 **Introduction**

Chapter 2 **Mature Eosinophils – General Morphology**

Chapter 3 **Eosinophils as Secretory Cells**

Chapter 4 **Eosinophil Activation**

Chapter 5 **Subcellular Localization of Immune Mediators and other Proteins**

Chapter 6 **Eosinophil Cell Death**

Chapter 7 **Immature Eosinophils**

SECTION II - EOSINOPHILS IN HUMAN DISEASES

Chapter 8 **Eosinophil-associated diseases**

SECTION III - THE CELL BIOLOGY OF MOUSE EOSINOPHILS

Chapter 9 **Ultrastructure of Mouse Eosinophils**
